## Summary

Aspiring web developer with solid experience in frontend technologies like HTML, CSS, and JavaScript, building responsive and user-friendly interfaces. Eager to expand skills into backend development and contribute to full-stack projects. Fast learner with a strong commitment to improving and adapting in dynamic development environments.

## Experience

### Softwarez, at its Best | Front-end Engineer Intern | September 2024 - February 2025

- Developed multiple responsive landing pages using Gatsby, Material UI, Blazor, and MudBlazor.
- Contributed front-end fixes and enhancements to deployed websites, primarily [Crashr](#) from the Github board.
- Authored an 80-page [documentation](#) using Typst to outline front-end standards and streamline the onboarding process for new developers.
- Built custom components, including a carousel and animated UI elements, implemented theming, and added dark/light mode.
- Gained hands-on experience creating transactions on the Cardano blockchain.

## Projects

### Image Classification of Venomous and Non-Venomous Snakes in the Philippines with Ensembled Transfer Learning

- Scraped 50,000 links and 5,000 images from the Philippine Snake ID Facebook Group using Selenium as inputs for training the models.
- Performed exploratory data analysis, partially pre-processed the images, developed pre-trained models (ResNet50, VGG16, and DenseNet201).
- **Tech Stack:** Python, Jupyter Notebook

### Teyvat Compendium: Genshin Character Data Vault

- Fetched and integrated data from an open-source API for the popular gacha game Genshin Impact to display assets within the application.
- Developed interactive dashboards with character stats and data visualizations, enhancing user engagement and gameplay insights.
- Implemented Firebase authentication, allowing Google and phone logins for users to manage their favorite characters.
- **Tech Stack:** Dart, Flutter, Firebase

### Arty Mart: Devian Art Inspired Platform for Selling Artworks Online

- Developed front-end modules using React libraries, including components for toasters, image masonry layouts, and tailwind elements.
- Implemented image storage functionality using Cloudinary, facilitating efficient and secure online storage of artworks.
- Connected the backend to a MongoDB database using GraphQL, including the creation of resolvers, models, and types.
- **Tech Stack:** React, Vite, Tailwind, MongoDB, GraphQL, Cloudinary

## Education

### Bachelor of Science in Computer Science | University of San Carlos | 2025 | GWA: 1.6

- Consistent Deans Lister 2021 - 2023

## Skills

- **Languages, Tools, and Platforms:** JavaScript, Typescript, Python, C, PHP, Dart, SQL, Git, Github, Typst, Figma, XAMPP, GraphQL,
- **Frontend and UI Development:** HTML, CSS, React, Gatsby, Blazor, Flutter, Tailwind CSS, Bootstrap, Material UI, MudBlazor, NextJS
- **Backend Development and Databases:** NodeJS, Express, Drizzle, MySQL, Torso, Firebase
